PLANETGEAR PRE/PRF: More flexibility and top performance for standard applications

While Nidec Graessner is primarily known for high-end solutions in the gearbox sector, with PlanetGear PRE/PRF, the company presents a series that is optimised especially for standard applications. This results in demand-oriented solutions for a wide range of applications, more flexibility in design and reduced automation costs.

Automation thrives on its players being able to draw on a wide range of solutions. Nidec Graessner is therefore expanding its product portfolio with the PlanetGear PRE/PRF series, which offers gear units for all common areas of application. With highly specialised high-end gearboxes on the one hand and high-performance standard gearboxes on the other, the company offers its customers the right gearbox solution for every requirement from a single source.

With the numerous differences in the application of the individual gearbox solutions, the following also apply to PlanetGear PRE/PRF, the same high standards of precision and functionality apply to all Nidec Graessner products. The large warehouse capacity also enables particularly short delivery times throughout Germany.

Your advantages

- Reduction of automation costs
- Access to a wide range of solutions tailored to your needs
- More flexibility in design
- Large storage capacity with short delivery times
